Second-Year Engineering Student – Computer Science

Haythem IDI

France ☎ +33 7 44 29 98 95 ✉ haythem.idi@ensi-uma.tn Haythemidi02 Haythem IDI

PROFILE

- **Second-year Computer Science engineering student at Télécom SudParis** (double degree with ENSI), specialized in **AI engineering and software development**. Shipped production AI systems for real clients as an **AI Engineer Intern at Allemnii** (GCP, Firebase, Gemini API, agentic workflows), and published **software quality research** at LARODEC on LLM-based code analysis and pull request decomposition. Skilled in **Python, Java, JavaScript/React, and FastAPI**, with hands-on experience in **LLM integration, RAG, and cloud deployment**. **Founder of ORBYX ENSI Club**, with AI workshops delivered to **200+ students**, and active **competitive programmer**. Seeking an AI/software engineering role where I can build and deploy impactful products.

EDUCATION

Sep 2026-Present, Paris

- Engineering Cycle in Computer Science, Télécom SudParis (TSP)

Sep 2024-2026, Mannouba

- Engineering Cycle in Computer Science, National School of Computer Science (ENSI)

Sep 2022-2024, Tunis

- Mathematics Physics, Preparatory Institute for Scientific and Technical Studies (IPEST)

Sep 2018-2022, Monastir

- Mathematics Baccalaureate, Lycée Moknine – Highest Honors (Average 19.06/20)

EXPERIENCE

AI Engineer Intern — Allemnii **Jun 2026 – Aug 2026**

Worked remotely alongside the Founder and Principal AI Engineer of Allemnii, contributing to production systems for real clients.

- Led the migration of the Antique Phonograph Society website from Azure to Google Cloud Platform, moving a legacy site to a cloud-native architecture, rebuilding the full website from scratch as a modern, cloud-native application while preserving all of its existing features.
- Built and deployed AI-powered features on GCP (IAM, BigQuery, Gemini API) and Firebase (Cloud Functions, Firestore, App Hosting).
- Designed and refined prompts, system instructions, and evaluation flows for LLM-powered and agentic workflows.
- Used AI coding agents (Claude Code) in the daily workflow, directing them, reviewing their output, and shipping agent-generated code responsibly.
- Wrote PRDs, technical design docs, and AI specs so features were well-scoped before development.
- Supported data pipelines and audit logging, and maintained security and IAM hygiene across GCP environments.
- Joined client and stakeholder calls to explain technical work and handle project handoff.

Research Intern — Laboratoire LARODEC **Jun 2026 – Aug 2026**

Worked remotely alongside a fellow student under the mentorship of two researchers on a software quality research project, contributing to *Toward AI-Assisted Decomposition of Large Pull Requests into Reviewable Changes*.

- Conducted a qualitative study of pull request (PR) splitting behavior, applying structured grounded-theory coding to build a “why” taxonomy (motivations) and a “how” taxonomy (mechanisms) over a 72-case development set.
- Built a Gerrit-based data pipeline with LLM-based split detection, using a two-stage triage architecture (a lightweight model for batch filtering, a full model for confirmed candidates), with checkpoint recovery and rejected-output logging.
- Reviewed prior work on commit and PR untangling (SmartCommit, ColaUntangle, Atomizer) and multi-agent LLM frameworks (MetaGPT, MARE, INTERVENOR, SpecRover), covering heuristic, program-slicing, dependency-analysis, and pattern-matching approaches.
- Co-authored the research paper in LaTeX using the ACM `acmart` template.

Research Intern — Laboratoire LARODEC **Jun 2025 – Aug 2025**

Worked remotely alongside a fellow student under the mentorship of two researchers on a software quality research project, contributing to **ClassMoveExplorer**, a Python prototype that detects misplaced classes in large Java projects and suggests the correct destination package.

- Combined dependency analysis, semantic embeddings, and an LLM module to identify misplaced classes and recommend the package each should move to.
- Applied static analysis and AI-assisted refactoring techniques to large Java codebases.

TECHNICAL SKILLS

Programming Languages : Python · C · C++ · Java · JavaScript · PL/SQL · Assembly
Frontend: HTML5 · CSS3 · JavaScript · React
Backend: FastAPI · Firebase Cloud Functions · REST APIs
Cloud & Infrastructure : Google Cloud Platform (IAM · BigQuery) · Firebase (Firestore · App Hosting) · Azure · Cloud Security & IAM Hygiene
AI & LLM Engineering : Gemini API · Prompt Engineering · System Instructions · LLM Evaluation Flows · Agentic Workflows · AI Coding Agents (Claude Code)
Data & Operations : Data Pipelines · Productivity & Audit Logging
Documentation & Delivery : PRDs · Technical Design Docs · AI Specs · Code Review · Production Deployment · Client Handoff
Tools and Environments : Docker · Linux (Bash · AWK · Sed · GNU utilities) · Git · GitHub

---

Projects

APS Website **Jun 2026 – Aug 2026**
Rebuilt the Antique Phonograph Society website from scratch as a modernized, cloud-native application, migrating it from Azure to Google Cloud Platform while preserving all of its existing features.

Large Pull Request Splitter **Jun 2026 – Aug 2026**
A research project and LLM-based pipeline for decomposing large pull requests into reviewable changes, combining a grounded-theory study of PR splitting behavior with Gerrit data extraction and two-stage LLM split detection.

Pastewise **May 2026**
An AI-powered Chrome extension that analyzes copied code before pasting, providing instant explanations, concept tags, and learning insights through a FastAPI backend.

IDRS **November 2025 – May 2026**
An AI-based Intrusion Detection and Response System that detects network anomalies and web attacks using machine learning, deep learning, and NLP models, with a FastAPI backend, React dashboard, and Gemini-powered RAG engine for real-time monitoring and automated remediation.

ClassMoveExplorer **Jun 2025 – Aug 2025**
A Python prototype detecting misplaced classes in large Java projects and suggesting the correct destination package using dependency analysis, semantic embeddings, and an LLM module.

Web-based Kiosk Management System **Jan 2025 – May 2025**
A PHP/MySQL web application for managing a service-station kiosk with an admin dashboard for tracking sales and operations.

CERTIFICATIONS

- NVIDIA — *Fundamentals of Deep Learning*
- DataCamp — *Introduction to LLMs*
- DataCamp — *Supervised Learning Track*

Extracurricular Activities

- **Chairman & Co-founder of ORBYX ENSI Club:** Lead an AI-driven student community; organized and delivered AI workshops to **200+ students**, mentored student projects, and initiated Kaggle competitions to promote practical machine learning skills and collaborative innovation.
- **ECPC Expert Member:** Regular Codeforces competitor with strong focus on advanced problem-solving and algorithmic optimization.

Interests

Artificial Intelligence · Competitive Programming

Languages

French: Very good proficiency **English:** Very good proficiency **Arabic:** Native language
